Productivity Dashboards

Access to Information Made Easier.

Dashboards, analytics and solutions that keep you in the know.

Today there is more clinical and business management data associated with anesthesia and pain management practices than ever before. However, with all of this data, clients are experiencing data overload. They are struggling to make sense of what matters and what the data tells them so that they can make productive business decisions. Traditionally, you had to run hundreds of reports and sift through thousands of pages to learn what may or may not have changed during the past month, the quarter or year. With so many priorities and so little time, many choose to postpone reviewing critical anesthesia reports.

In this era of big data, new tools, methods and approaches had to be developed to address this data overload. Rather than have users “pull” data via reports, the concept of dashboards was developed that allows data to be presented to users. The use of data analytics determines what is important. Each dashboard is a visual display of the most important measures needed to achieve one or more objectives. Access is through our *F1RSTClient* secure client portal. Inside *F1RSTClient*, you will find our list of dashboards, performance reports and data analytics. These will continue to grow as your practice’s needs change.

You live in a busy world and you are always on the go. Our dashboards run on laptops as well as mobile devices, giving you actionable insight at your convenience.

How Efficient is Your Practice?

ABC's powerful, intuitive *F1RSTAnalytics* Productivity Suite provides a number of dashboards that help you quickly understand how well your practice operates.

The **Facility Productivity Dashboard** helps you focus on production for each of your facilities. As a part of the Productivity Suite, this dashboard provides perspective into your day shift's average production for average billed hours per room, average number of cases, average number of units and your productivity percentage with the data displayed on a per day of the week basis. The **Facility Productivity Dashboard** also spreads your billed hours by hour for the combined shift or by individual day of the week. Whether you're looking at a facility, an area or a single operating room, at a glance the **Facility Productivity Dashboard** gives you detailed insight down to each hour of your defined shift.

The **Facility Productivity Dashboard** also provides some "what-if" capabilities to change the number of rooms in use for both current and prior year data on both the "by facility" and "by area facility" tabs. Changing the number of rooms adjusts the average billed hours, cases, units and productivity percentage to give a sense what would be different if conditions changed.

How Well are the ORs Being Utilized?

The **OR Utilization Dashboard** helps you focus on operating room (OR) production across the spectrum of your schedule. As a part of the Productivity Suite, the **OR Utilization Dashboard** allows you to see how your average billed hours by day of the week and productivity percentage compare to the coverage you have committed to provide. The **OR Utilization Dashboard** allows you define your three shifts (days, off shift and weekends).

Because this dashboard shows multiple shifts, you can also use this dashboard to model or explore the possibilities of changing your shift's days, durations and/or the scheduled starts and finishes to optimize your staffing coverage based on actual billed hours whether you're looking at a facility, an area or a single operating room.

The **FIRSTAnalytics** dashboards give you actionable insight, in real time. Need more data? These dashboards give you visibility into the actual data as well as the ability to export and drill-down into the detailed data. The **FIRSTAnalytics** suite of dashboards and performance reports give you the knowledge you need to operate your anesthesia practice as an effective clinical organization and successful business.

How are Your Cases Staffed and Managed?

The **Case Concurrence Dashboard** helps you understand how your practice's cases are managed and performed. The **Case Concurrence Dashboards** provide insight about all time-based cases and whether those cases are personally performed or medically directed. For cases that are medically directed, the cases shown are split by the ratios (1:1, 1:2, 1:3 and 1:4). At a glance these dashboards show you your case mix by percentage or by case count, by day of the week or by hour of shift.

The **FIRSTAnalytics** Dashboards give you actionable insight, real-time.

Need more data? These dashboards give you visibility into the actual data as well as the ability to export and drill-down into the detailed data. The **FIRSTAnalytics** suite of dashboards and performance reports give you the knowledge you need to operate your anesthesia practice as an effective clinical organization and successful business.

FIRSTAnalytics – The information you need, provided in a way you can use it.
