

F1RSTAnesthesia

The ABC Technology Advantage

The sophisticated requirements of anesthesia billing and accounts receivable management requires a powerful, flexible data management process. ABC's *F1RSTAnesthesia* is just that. No other stand-alone software package or billing service system offers such an array of powerful practice management tools.

Advanced, Secure, Reliable Unique

The advanced, secure and reliable *F1RSTAnesthesia* converts clinical information into claims for reimbursement. This powerful tool supports electronic claims editing to ensure consistently high billing acceptance rates and minimizes manual intervention in payment posting through direct remittance processing. Providers also are able to receive real-time or historical information through *F1RSTAnesthesia's* web-based technology or advanced data warehousing/data-mining technology.

No one feature of a billing system is more critical, yet more difficult to integrate, than real-time payment verification. *F1RSTAnesthesia* is unique in the way it calculates both

the usual and customary charge and the allowables simultaneously. This not only facilitates the validation of payments against allowable contract amounts, but also permits reports to be generated showing expected payments and true accounts receivable.

The system captures both CPT surgical and ASA codes for all anesthesia charges so that claim forms will automatically include the appropriate code. *F1RSTAnesthesia* is specifically designed with the anesthesia and pain provider in mind and allows for a variety of interface options and data access platforms. The system incorporates years of practical experience in the oversight and management of all the steps involved in billing and collections.

F1RSTAnesthesia

No other system can have such a positive impact on your bottom line:
Net collections for the services you provide.

Affect Your Bottom Line

Let **F1RSTAnesthesia** improve your business with:

- Effective and timely capture of invaluable demographic information.
- Electronic claims editing ensures consistently high acceptance rates.
- Unlimited capability to enhance the retrieval of the documentation received for the most accurate coding possible.
- Support for the seamless process of converting clinical information into claims for reimbursement.
- Support the accurate accounting of all the transactions on each patient's account.
- Allow for ease of communication so that reporting can meet the needs of the group.
- Features and functionality anticipate the monitoring of payment accuracy and compliance with governmental and payer guidelines.
- The structure and design of anesthesia billing provides a logical framework for the aggressive management of accounts receivable.

Powerful and Flexible

For all its comprehensive functionality **F1RSTAnesthesia** is also one of the most flexible software solutions ABC has developed for billing anesthesia services. Record layouts are not limited to a finite set of data points necessary to generate claims. It can also quickly be enhanced to include any aspect of practice management. It is this aspect of **F1RSTAnesthesia** that provides the greatest advantage in dealing with the ever-changing requirements of today's anesthesia practice management.

Joining **F1RSTAnesthesia's** software strength is a carefully crafted service line that encompasses the perioperative process:

- ABC's Qualified Registry (QR)
- F1RSTClient, ABC's patient portal
- F1RSTAnalytics, ABC's practice management data analysis software
- Anesthesia Touch™ by Plexus Technology Group, ABC's affiliate AIMS partner
- Patient satisfaction by Survey Vitals
